SUMMARY

Python Developer and Data Analyst with a strong foundation in data analysis, data cleaning, and software development using Python, SQL, Excel, Power BI, and Pandas. Skilled in developing Python applications, automating data workflows, building interactive dashboards, and extracting actionable insights from complex datasets to support business decision-making. Experienced in statistical analysis, data visualization, and working on real-world projects. Passionate about solving data-driven problems, writing efficient code, and continuously enhancing technical and analytical skills.

EDUCATION

Alliance University(Bachelor of Technology) — Bengaluru, India
Computer Science & Engineering: CGPA: 8.5 — **September 2022 - June 2026**
Abhyas Junior College — Andhra Pradesh, India
Intermediate – Mathematics, Physics, Chemistry: Percentage: 96.1 — **June 2020 - August 2022**

SKILLS SUMMARY

- **Languages**: Python,Java(Beginner), SQL
- **Python Libraries:** Pandas, Numpy, Matplotlib
- **Tools:** Git, Visual Studio Code, Power BI, Microsoft Excel(Advanced)
- **Databases:** MySQL, MongoDB

PROJECTS

Automated FAQs Generator from Policy or Instruction Documents - Python, NLP

- Developed an AI-powered system to automatically generate FAQs from lengthy policy manuals and institutional documents.
- Utilized Natural Language Processing (NLP) and Generative AI to extract key information and create context-aware Q&A pairs.
- Implemented document upload and structured FAQ generation through a user-friendly interface.
- Designed the assistant to act as a 24/7 first-line support tool, promoting user engagement and reducing information overload.

Chat Application System - Socket.IO

- Secure Authentication System: Implemented email-based OTP verification and JWT authentication to ensure secure user login and session management.
- Real-Time Chat Application: Built a real-time messaging system using Socket.IO, allowing users to chat instantly with message synchronization.
- Smart Reminders & Alerts: Users can create time-based reminders with calendar support, and receive email alerts with attached links or files.
- Developed using Node.js, Express, MongoDB, React, and designed to be production-ready.

Online Recruitment System - SQL

- Designed and implemented a console-based application to manage candidate records with full CRUD functionality.
- Enabled candidates to apply for job and internship positions through the recruitment system.
- Enabled recruiters to review candidate profiles and accept or reject applications.
- Built a structured, menu-driven interface to streamline the recruitment process for end-users.

Amazon Prime Dashboard - Power BI, Excel

- Developed an interactive Power BI dashboard to analyze Prime Video content trends, identifying Drama as the most popular genre, followed by Comedy.
- Performed data modeling and visualization to transform raw streaming data into clear, actionable insights using dynamic charts and filters.
- Enabled data-driven decision-making by presenting genre-wise analysis through an intuitive and user-friendly dashboard interface.

CERTIFICATES

IEEE TQCEBT 2026 – Paper Presentation Certificate

Compiler Design - NPTEL

Flipkart GRID 6.0 – Software Development Track (August 2024)
